

Envision Double-Hung Windows

The perfect blend of classic style, easy maintenance, and superior performance.

Vector Windows presents Envision Double-Hung Windows—designed to enhance your home with effortless operation, low maintenance, and customizable options. These windows offer both beauty and functionality, with two sashes that open and tilt in for easy cleaning, plus the flexibility to pair with picture windows and specialty shapes for a truly distinctive look.

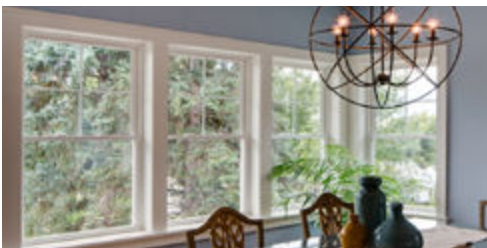

Classic Design with Modern Appeal

Envision Double-Hung windows feature a continuous head and sill, available on multi-wide units up to 8 feet, offering clean sightlines and more visible glass than traditional double-hung windows. The top and bottom sashes open for optimal ventilation, while full screens keep bugs out.

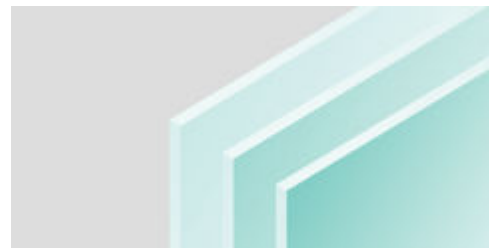

Exceptional Performance

The telescoping welded sill detail enhances performance and structural rigidity, while high-performance sloped sills, crafted from a single extrusion, offer greater strength and durability. Multi-chambered extrusions and storm interlocks improve energy efficiency, and the integrated full-perimeter nailing fin with triple weather seals ensures a weathertight fit that reduces drafts and prevents leaks.

Easy Operation & Simple Cleaning

Constant force balances provide additional lift assistance for smooth and effortless operation. Tilt latches allow both sashes to tilt inward for easy cleaning from the inside, even with larger double-hung windows.

Energy Savings with ENERGY STAR® Certification

Want to achieve the ultimate in energy savings? Our Envision Double-Hung windows are available with triple-pane glass, which qualify for the new Energy Star® “Most Efficient” product category.

Color & Glass Options

Interior & Exterior Color Choices

Choose from a variety of interior and exterior colors to suit your project needs.

Grid & Extension Jamb Colors

Customize your windows with grid color options and extension jamb colors.

Glass Options

Select from energy efficient LoE, clear, or tinted to meet your design needs, including options for Acoustic Glass to reduce noise and Breather Tubes for optimal performance at high altitudes.
